**Subject:** Individual fish GIS locations by composite / sample number  
**Date:** 04/13/2006 02:15 PM

---

Eric and Chip,

Eric, I left you a voice mail message, but I wanted to clarify by e-mail. Arron needs some additional information before he can get the info to Bruce. We are close! For each tissue composite, we need the individual fish tissue locations (GIS) that went into the composite. With this information, Arron can depict what area (or segments) of the river each sample composite represents. We don't have anything electronically that links this info. However, it should be easy for the LWG because the maps presented in the Round 1 Site Characterization report show exactly what we are asking for - each composite number clearly shows (by color or symbol) the location of each individual fish that went into the composite.

Please give me a call if you have any questions!

Thanks!

-Jennifer
